Weight: 6.40 kg/m² | Weight: 8.70 kg/m²
Weight: 10.50 kg/m²

WE INNOVATE.YOU WIN

MONDO

GREENGUARD GOLD CERTIFICATION

Air pollution can have a negative effect on athletes' performance and put their health at risk. During training and competition, athletes breathe 20 times more than they would normally. This means that they are 20 times more exposed to pollution risks. That is why mondo has been striving for years to achieve low VOC emissions and have that confirmed by independent external laboratories, such as UL Environment, which has given our surfaces GREENGUARD GOLD Certification, or by accredited laboratories, which have awarded them class A+ according to the French Decree.
