

Telescopic High Jump Standard

AA010

Designed and manufactured in accordance with, and certified under, the Regulations of the International Federation (IAAF Certificate E-00-0251).

It consists of two extruded aluminum profiles, a lower one that serves as support, with a square section of 80x80 mm with rounded edges, and an upper one, telescopic, with square section of 50x50 mm.

Both profiles are equipped with a crossbar support.
Adjustable from 0.3m to 2.57 m.

The crossbar support and the telescopic profile are secured by means of polypropylene knobs.

The base, made of steel, provides sufficient weight to prevent any movement of the uprights. It is equipped with two 60 mm diameter wheels. The wheels only act when the structure is inclined, ensuring stability during use and allowing mobility.

Two leveling knobs allow for the leveling of the standard on any surface.

After a degreasing treatment, consisting of a pressured phosphate bath, the base is painted with polyester powder paint and polymerized at 200° C in an oven.

All the metal elements, such as screws, the rotating axes, etc. are subjected to a chemical galvanizing treatment.
