

## Set of MONDOHANGER basketball units

PK510 - PK511 - PK512 - PK513 - PK514 - PK515 - PK530 - PK531 - PK532 - PK533 - PK534 - PK535

Set of two basketball units designed, certified and manufactured to comply with the EN-1270 requirements (evaluation by Instituto de Biomecánica de Valencia). It is designed with the latest CAD technology and finite elements analysis to calculate the impact and vibration produced by playing basketball.

This basketball unit is installed in the ceiling trusses and has automatic elevation operated by a control panel. Depending on the size of the indoor gym it can be folded to the front or to the back. It is mainly designed to be used in the main central basketball court of an indoor gym.

Several options can also be chosen for the ring (tilting or fixed), the board material and thickness. The board is protected with a padding around the bottom section.

MONDOHANGER multitubular structure is painted in standard white colour, but other colours can be used among the standard range.

The installation of the basketball unit differs for each type of sports facility and because of that Mondo's technical staff studies each case and develops the most appropriate solution. The additional structure to fix the MONDOHANGER to the ceiling trusses will be manufactured and adapted according to the characteristics of the sports centre, so it has to be studied and quoted separately.
