

Wheel system for MONDOTRAINING / MONDOMINI basketball units

PK728

Retractable wheel system to be coupled with basketball units MONDOTRAINING and MONDOMINI for easy manual transport.

Designed with the latest CAD technologies and manufactured with structural tube steel wheel system is a hinge that incorporates two fixed and two swivel wheels for easy handling.

It adapts to the base of the basketball units without any additional coupling.

The wheel system when the basket is in its use position remains up, and does not allow its transport. The complete base of the basketball unit is in contact with the floor while maintaining a perfect support for playing basketball.

When the basketball unit has to be moved, the wheel system is lowered through a manual lever which, by means of a central hinging device, raises the basketball unit so that only the four wheels are in contact with the floor.

The system is fixed in this position by putting bolts after which the basketball unit can be moved.

All elements of junction, rotation of screws are made of steel and subjected to zinc treatment.

The product is painted with polyester powder paint, which is applied after a degreasing treatment using a pressurised phosphate bath and cured in an oven at 200°C

Standard color: blue.
