

Set of one side shotclock scoreboards

MMAPIR - MMAPIIC

Set of two shotclock scoreboards FIBA approved, designed to be placed on the floor or over the basketball units. Each of them is connected to the control panel by radiofrequency or cable. The main scoreboard must be a MONDO to be synchronized with the main scoreboard game time.

Manufactured in a black embossing aluminum frame, each one has a total weight of approximately 10 kilos. It has a small handle on top for easy transport.

Its dimensions are 540 x 450 x 145 mm.

All the digits are red-colored and 30 cm high and made of high luminosity LEDs placed behind methacrylate sheets to be easily seen.

It also contains a horn that signals the end of ball possession..

The scoreboard comes with a MONDO control panel from which this scoreboard can be easily operated.

Communication between the control panel and the scoreboard can be done by cable (MMAPIC) or radiofrequency (MMAPIR), depending on the customer's choice.

MONDO strongly recommends cable communication for big indoor halls and basketball competitions due to the expected use of other external wireless devices at the same time.
