

Starter's Podium

AC050

It consists of a two-step structure, made of high-resistance steel, equipped with wheels, handrail, and a non-slip floor.

The wheels, made of injected polypropylene, only act when the structure is inclined, ensuring stability during use and allowing mobility.

The non-slip floor is made of knurled aluminium plate.

All metal elements such as bolts, shafts, etc. are zinc coated.

After a degreasing treatment, consisting of a pressured phosphate bath, the structure is painted with polyester powder paint and polymerized at 200° C in an oven.
