

POWERPLAY PRO

MAXIMUM COMFORT, THE SAFETY OF RUBBER

POWERPLAY™ PRO IS A POINT ELASTIC SPORTS FLOORING FOR MULTI-SPORT GYMS. IT PROVIDES SHOCK ABSORPTION VALUES BETWEEN 25% AND 34% (CATEGORY P1 ACCORDING TO EN14904 STANDARD).

SMOOTH SOLID RUBBER TOP LAYER

The vulcanized rubber top layer has a smooth finish and optimal grip with no need for additional finishes or surface coatings. The surface is durable and highly resistant to wear and tear. Our rubber top layer is available in many different colors, including colors that mimic the look of real hardwood.

MULTILAYER CONCEPT

The system is assembled by arranging layers of varying composition and elasticity on-site. Thanks to the combination of elastic under layer and surface finish, the system is able to respond specifically to the requirements of each sport, even in the event of intensive use and in multipurpose facilities.

POWERPLAY PRO

The floor consists of two layers of natural and synthetic rubber that are joined to an elastic supporting sublayer during production.

In addition to its elasticity features, the product's multilayer structure ensures the dimensional stability that is required for loose-laying, without having to glue it to the base layer. This speeds up fitting operations and retains the sports surface's biomechanical properties for a longer period.

MULTILAYER COMBINATION: BIOMECHANICAL PROPERTIES UNCHANGED OVER TIME

Powerplay PRO's three modulated density and hardness layers are joined together during the production process to form a single uniform sports surface. This ensures that the loads are evenly distributed, the energy is evenly returned and that the impacts produced during sporting activity are optimally absorbed.

The top layer is compact and made of vulcanised rubber and has a surface layer with a smooth, non-slip, anti-reflective finish that ensures a perfect grip for pivot movements and for sudden direction changes. It's vulcanised to a rubber supporting sublayer that improves its stability and shock absorption capacity.

The lower layer is a stabilising and shock-absorbing base layer that is made of glass-fibre reinforced PVC foam. This provides shock absorption, energy return, elasticity and sound insulation features to the flooring.

POWERPLAY: GAME QUALITY THAT LASTS OVER TIME

The material's compactness and durability is given by the rubber vulcanisation process that slows down the hardening process that is typical of other synthetic materials.

Therefore, choosing Powerplay™ implies having a sports surface that will retain its biomechanical characteristics for much longer.

Loose-laying without bonding to the base layer is possible thanks to Powerplay™ PRO's combined multilayer structure: the flooring ages more slowly because it is not constrained by chemical binders and is protected from rising damp problems.

Powerplay™ offers a wide range of colours that allow vivid and neutral tone combinations and match solid and marbled colours thus creating new aesthetic impact effects.

RUBBER FLOORING: A VICTORY FOR THE ENVIRONMENT AND FOR THE ATHLETES' HEALTH

Powerplay™ is designed to be an environmentally responsible sports flooring.

25% of the organic polymers in its formulation come from bio-mass: natural rubber is in fact a product that is not derived from petroleum and has a less than 10 years collection cycle. This makes it a rapidly renewable material.

Powerplay™ contains more than 10% pre-consumer, contaminant-free, non-tire recovered raw materials and is produced in the Gallo d'Alba (Italy) plant that is powered by a photovoltaic system. In fact, none of the substances that are in the Powerplay™ formulation are included in the REACH list of substances of very high concern due to the hazard caused to humans and the environment.

MONDO has chosen to certify the sustainability of its Powerplay™ rubber flooring for indoor sports facilities with an [Environmental Product Declaration](#) (EPD) so that its environmental impact is effectively documented throughout its entire life cycle.

This document is based on a LCA ([Life Cycle Assessment](#)) study and has been drafted by external and independent technicians. It provides the consumption of resources (materials, water, energy) and the impact that the various phases of the product's life cycle have on the surrounding environment in a complete, accurate, verifiable and unambiguous manner.

Powerplay™ is not only environmentally responsible: it's a product that safeguards the health of the athletes and sport lovers who use it.

It has been awarded the Greenguard Gold certification because of its extremely low emissions of volatile organic compounds (VOCs), thus it reduces the amount of air pollutants and helps to [improve air quality in sports facilities](#).

Like all MONDO vulcanised rubber floorings, also Powerplay™ has a compact, waterproof and non-porous structure: it does not absorb liquids, perspiration and dirt. Therefore, no moisture remains on the surface and dirt is easily removed: indeed bacteria find their main nourishment in dirt and this hinders them from proliferating.

The surface layer is compact and made of vulcanised rubber (not made of compressed rubber crumb) and has itself excellent natural antibacterial characteristics, without any need to add biocide ingredients to its formulation: tests carried out according to the ISO 22196 standard confirm that the reduction of inoculated bacteria on the Powerplay™ surface exceeds 99.999% within 24 hours (antimicrobial activity factor "R" greater than 5).

Therefore these features make routine Powerplay™ flooring cleaning and sanitising simple and effective, and keep the sports facility hygienically safe for its users.
