

VINYLSPORT M COMBINED WITH EVERLAY® UNDERLAYMENTS THE PERFECT COMBINATION.

Vinylsport M is a prefabricated multilayer PVC sports flooring that is ideal for indoor multisport installations.

When combined with Everlay - a waterproof, shock-absorption underlay - , the system offers complete insulation against rising damp so the flooring can be installed without glue. In the case of temporary events, it can simply be attached with adhesive tape.

Vinylsport M and Everlay® are available in different thicknesses, with differentiated shock absorption values, providing a comprehensive range of solutions for categories P1, P2 and P3 of the EN14904 standard.

VINYLSPORT M EVERLAY®, KA 25%

Vinylsport M 7 mm, combined with Everlay® A, in compliance with the European standard EN13984, ensures complete insulation from rising damp, as well as providing shock absorption values that are in line with category P1 of the EN14904 standard.

This combination is ideal for multisport gyms where a number of different team games are played.

VINYLSPORT M PERFORMANCE, KA 35%

5mm thick Vinylsport M PVC sports flooring with Everlay® Protection guarantees a perfect surface for training and competitions, particularly for basketball.

This FIBA-certified system ensures good impact absorption (in accordance with category P2 of the EN14904 standard) whilst guaranteeing the best safety conditions during play. The uniformity of the elastic response provided by Everlay® enables the ball to bounce evenly over the entire surface.

Everlay® Protection also allows this system to be installed without glue. In temporary installations, it can simply be attached with adhesive tape.

VINYLSPORT M PRO, KA 45%

7mm-thick Vinylsport M flooring with Everlay® Protection guarantees shock absorption values of more than 45%, in compliance with category P3 of the EN14904 standard, ensuring maximum comfort and safety for players.

The elastic uniformity of the system allows the ball to bounce evenly across the entire playing field, while the surface finish minimizes the risk of friction burns.

Vinylsport M PRO is an ideal solution for school sports facilities. Its high shock-absorption values minimize the risk of long-term injury from falls. This feature also makes Vinylsport PRO suitable for professional training facilities and a safe and high-performance alternative for temporary installations for sporting events.

This feature also makes Vinylsport PRO sports flooring suitable for professional training facilities, as well as rendering it a safe and high-performance alternative for temporary installations for sporting events.
