

STX SUPERCOURT

TOP-LEVEL PADEL TENNIS.

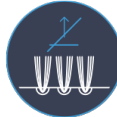

STX SUPERCOURT IS A CUTTING-EDGE ARTIFICIAL TURF SYSTEM COMPOSED OF STX MONOFILAMENTS WITH AN UPRIGHT STRUCTURE AND A CENTRAL SPINE, AND SAND INFILL.

TEXTURIZATION

A thermo-mechanical treatment of the turf fibres which results in curled filaments.

BACKING WITH POLYURETHANE COATING

During the manufacturing process of Mondoturf layers, fibres are woven on a double-layer polypropylene backing and affixed with a polyurethane application.

STX SUPERCOURT

Even when padel tennis is played at the highest level, fun is the name of the game. MONDO developed the STX Supercourt system specifically for the center court of the World Padel Tour, and to offer sports clubs the same high-performance surface the world's top professionals enjoy.

STX SUPERCOURT: THE TURF OF CHAMPIONS

In 2016, MONDO developed a fiber capable of responding completely to the needs of professional padel tennis. STX SUPERCOURT guarantees consistent angular and vertical bounce on the court, before and after impact with the glass. Because of its texturized structure, the turf requires only a minimum amount of stabilization infill, and the sand stays in place among the fibers without becoming irregularly distributed across the surface.
