MONDOHOCKEY GOAL IS A NEXT-GENERATION ARTIFICIAL TURF SYSTEM COMPOSED OF TEXTURIZED STX MONOFILAMENTS WITH AN UPRIGHT STRUCTURE AND TEXTURED CENTRAL SPINE, AND PREFABRICATED ELASTIC UNDERLAYMENT IN RETICULATED POLYOLEFIN FOAM.

STX TEXT
A thermo-mechanical treatment of the turf fibres which results in curled filaments.

ELASTIC UNDERLAYMENT
Elastic underlayments made from expanded polyethylene foam.

BACKING WITH POLYURETHANE COATING
During the manufacturing process of Mondoturf layers, fibres are woven on a double-layer polypropylene backing and affixed with a polyurethane application.

MONDOHOCKEY GOAL

In hockey, speed is critical—but athletes also need a field that supports their movements without allowing the ball to roll too fast.

MONDOHOCKEY GOAL: A FIELD TO GROW ON.

Mondohockey GOAL is a synthetic turf system designed for hockey schools and training programs. The texturized monofilaments with central spines and sand infill create an extremely durable surface and optimal resistance to friction. The lightweight elastic polyolefin foam underlayment provides reliable support for players’ rotational movements. The system satisfies all of the technical parameters required by the FIH Quality Programme and is certified as an Approved Product in the National Category (beginners).
